

# UArizona

- H-1
  - photo- $z$  PDF estimation from biased galaxy calibration samples: effect on cosmology from cosmic shear power spectra
- H-2
  - development of simulation tools (available on [gitHub](#)): focus on star contamination and IGM stochasticity
- LT-1 (using  $p(z)$  information)
  - Investigating tractability and precision of 3-Gaussian (ie 8 parameter) model (cf H-1) in cosmological analyses
